KOMUNA E GJILANIT
MUNICIPAL GJILAN /OPŠTINA GNJILANE/GILAN BELEDIYESI

KONFERENCA E DONATORËVE DONOR'S CONFERENCE

Gjilan, mars '2014

VIZIONI

The Municipality of Gjilan will have efficient local governance with regulated urban and rural infrastructure and a clean and healthy living environment.

The strong tradition of industry and entrepreneurship will result in rapid SME development and an increase in employment.

Good cross-border cooperation will enable a better integration of regional economies and will create a favorable environment to attract investors.

Komuna e Gjilanit do të ketë qeverisje lokale efikase me infrastrukturë të rregulluar urbane dhe rurale, do të jetë një mjedis i shëndoshë dhe i pastër për jetesë.

Tradita e fortë industriale dhe e ndërmarrësisë do të shprehet me zhvillim të fuqishëm të NVMve dhe rritje dinamike të punësimit.

Bashkëpunimi i mirë ndërkufitar do të mundësojë integrimin e ekonomisë së rajonit dhe krijimin e ambientit për tërheqjen e investitorëve.

Ndërtimi i impiantit për trajtimin e ujërave të zeza – Gjilan

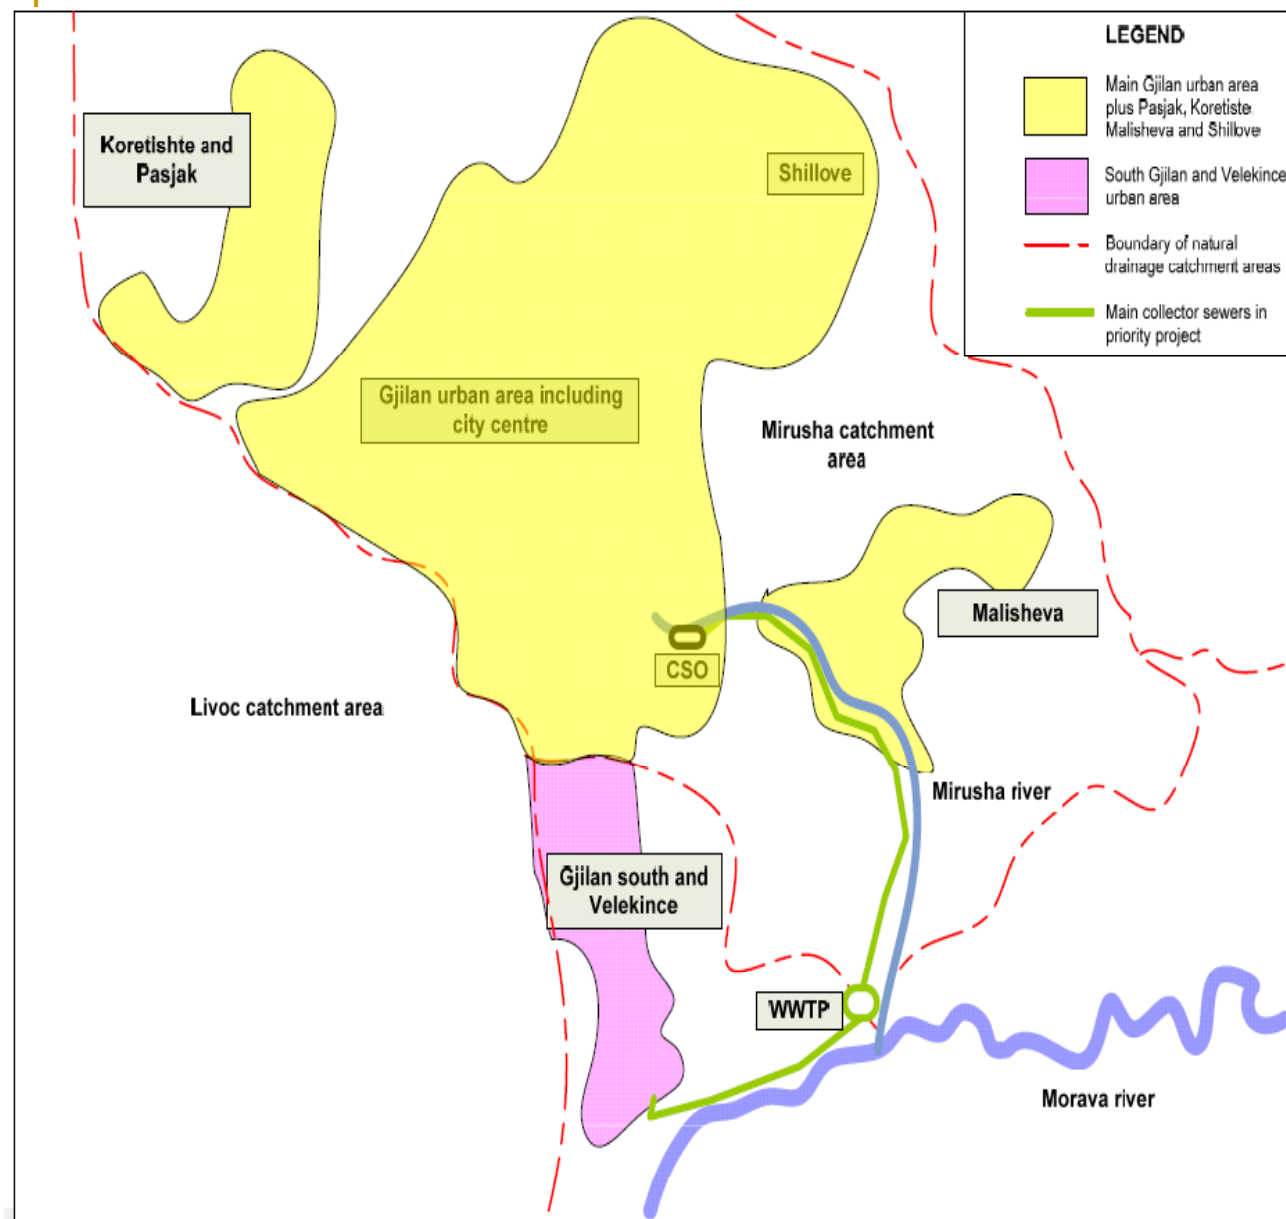

Construction of the wastewater treatment plant in Gjilan

Priority : Improvement of municipal infrastructure through wastewater treatment .

Preconditions : The feasibility study is completed.

Contribution to total cost from implementing institution(s) : 15 %

Project purpose : Gjiilan city lacks wastewater treatment plant. As a result of this situation, city sewage, is discharged into local rivers ("Mirusha", "Baja", "Stanishor River") thus creating a permanent risk to the health of citizens.

Even in the villages there is the same situation, so the wastewater is discharged into local rivers, all these rivers then flow into the river "Morava Binçes".

Conducted measurements resulted that this river has a high level of pollution.

Project Location : Village Uglarë, the point where several rivers meet Morava e Binçës, Mirusha and river of Stanishor.

Results to be achieved : Construction of the plant and improvement of the current situation because the sewage presents a permanent risk for the spread of an epidemic. The quality of surface waters and underground waters will improve to an acceptable level.

The aim of this project is protection and improvement of the quality of surface waters, improvement of the standard of services in the collection and treatment of wastewater and avoidance of pollution of surface water and underground water.
